

# Lab 3

## Aim:

### Configuring default route to the Router

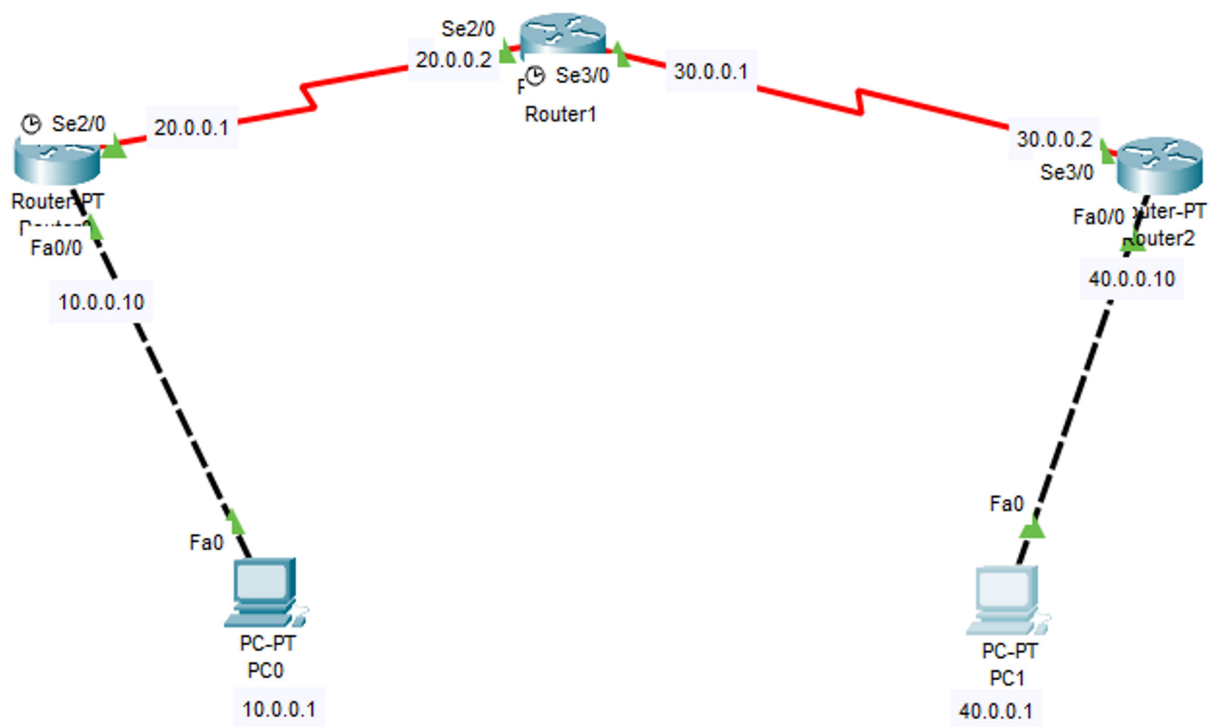

## Procedure:

1. Three routers and two PCs are connected as shown in the topology along with the numbered IP addresses, similar to Lab 2.
2. Pinging PC1 from PC0 at this state gives destination host unreachable
3. Adding static routes to the routers using `ip route <dest. network> <subnet mask> <next hop>` in the terminal, in enable and configure terminal mode.

## Observation:

Pinging PC1 from PC0 and vice versa works as expected. 'show ip route' command shows connected routers.

## Pinging works as expected

PC0

The screenshot shows the 'Desktop' tab of a Packet Tracer PC configuration window for PC0. A Command Prompt window is open, displaying the results of a ping command to 40.0.0.1. The output shows four successful replies with varying round-trip times (18ms, 2ms, 2ms, 2ms) and a TTL of 125. The ping statistics indicate 4 packets sent, 4 received, and 0% loss, with an average round-trip time of 6ms.
